

It is my understanding that broadcasts of the weather and traffic on Satellite Radio is being questioned by the National Association of Broadcasters. My occupation requires me to travel. I specifically purchased Satellite Radio for the express reason to get services that I cannot get from regular stations, When I need traffic and weather information, I NEED IT THAT INSTANT, not at the next up-date from a local station 30 minutes away. I do listen often to local stations however, I want the variety and quality that Satellite provides me. I sincerely feel that Satellite Radio has the right to exist and that I have the right to purchase the service it offers.

Sincerely Dwight Gresham
